Torsiflex Coupling Ranges

Specifically designed for the process pump, fan, blowers, compressors and general industrial markets.

- · Plug-in design allows rapid installation and ensures that shaft alignment is always maintained.
- Standard couplings fully compliant with the requirements of API 610 / ISO 14691.
- Engineered version compliant with API 671 / ISO 10441.
- · Incorporates anti-flail feature.
- Large hubs available.

AHX Hubs have been developed to accommodate large diameter shafts on process equipment. Large hubs cannot normally be used because of bolt withdrawal fouling the nearest obstruction. The AHX bolts withdraw from the spacer end thus eliminating this problem, allowing the hub to be mounted close to the equipment casing. Coupling sizes can be kept to a minimum.

- Torsiflex Couplings consist of 2 hubs and a factory assembled transmission unit. Installation involves fitting the hubs to the machinery shaft ends, introducing the transmission unit, then securing with the attachment screws.
- Maximum Speeds shown are for standard materials. When higher speeds are required, please consult Bibby Turboflex.
- Peak Torque of 1.75 and Momentary **Torque** of 2.7 times the stated ratings are accepted.
- Spark Free overload protection is provided as a standard feature on all Torsiflex couplings making them suitable for GAS ZONE environments.

- Suitable for temperatures of minus 20°C.
- Standard Spacer Lengths 100, 125, 140, 180, & 250mm provide the most economical solution and are generally available from stock. Other spacer lengths are available to order.
- Standard Couplings are designed for general purpose applications and are suitable for the majority of process pump, fan, and compressor applications. Special versions available include:
 - Torque overload protection
 - Limited end float
 - Electrical insulation
 - Bolted adapters suitable for high cyclic torques & frequent start
 - Large Hubs (AHX style)

Large Hub Boss Diameter. ** The inclusion of additional features such as packing rings, shims and/or electrical insulation will increase the minimum DBSE (Distance Between Shaft Ends).

New Sizes Highlited

Selection Procedure

- 1. Select an appropriate service factor "SF"
- 2. Calculate rating = Power (kW) x SF/Speed (rpm)
- Select a coupling with sufficient rating
- 4. Check hub bore is capable of accommodating shafts
- 5. Check Speed is within the maximum for the coupling selected
- 6. Specify required dynamic balance
- 7. Specify the distance between shaft ends and check this is not less than the minimum for the selected coupling

Eq. 90kW Direct on line electric motor driving a centrifugal pump at 3,000 rpm. Distance between shaft end = 140mm Rating = $90 \times 1.5 = 0.045 \text{kW/rpm}$

Selection TF0140L140 Screwed Adapter

Max hub bore = 73mm Standard Hub Max hub bore = 100mm AHX Hub

or Selection TF0140L140 Bolted Adapter Max hub bore = 84mm LAH Hub Max hub bore = 100mm AHX Hub

Service Factors

Driver	Driven	Service Factor (SF)
Turbines, Soft start motors	Steady Torque Eg. Centrifugal pumps	1.2
DOL (Direct On line) Start Motors	Fluctuating Torque Pumps, Rotary compressors (frequent starts)	1.5 (2)
DOL (Direct On line) Start Motors	Reciprocating Compressors 1 - 3 cylinders	3
DOL (Direct On line) Start Motors	Reciprocating Compressors 4 - 6 cylinders	2
DOL (Direct On line) Start Motors	Reciprocating Compressors over 6 cylinders	1.5
DOL (Direct On line) Start Motors	Centrifugal Fans forced draught	1.5
DOL (Direct On line) Start Motors	Cooling Tower induced draught	2

For all other applications please contact Bibby Turboflex

^{*} Large Hub Boss Diameter. ** The inclusion of additional features such as packing rings, shims and/or electrical insulation will increase the minimum DBSE (Distance Between Shaft Ends).

Special features can be designed into the coupling to suit the application. Taper Lock bushes, thrust buttons for vertical applications, shrink discs, and seal removal pieces are common additions.

Combined Anti-Flail system and Thrust Button. The Thrust Button is used to support the central spacer in vertical operation.

Taper Bush use in the hub at one end of the coupling to permit axial adjustment upon installation. Other clamp systems can also be incorporated into the designs. Please consult Bibby Turboflex.

Type TFCFT Composite Tube ("Plug-in") Couplings

The TFCFT range of composite tube disc couplings has been designed using the latest material technology- providing lower mass and greater strength. This type of unit was, originally, designed to meet the requirements of cooling towers but has since been adapted to meet the requirements of many alternative applications, specifically long vertical pump and marine drives. In addition to the disc coupling applications, Bibby Turboflex have developed the use of composite tubes in a number of other areas. The tubes have been designed and supplied for use in hovercraft fans, performance car drive shafts and high speed test beds. The tubes are filament wound on accurate mandrels using computer controlled machinery. The resulting tube is cured whilst on the mandrel. This process leads to high accuracy with regard to tube dimensions, roundness and straightness all of which aid in the ability of Bibby Turboflex to supply an extremely high quality product.

Purpose developed software enables Bibby Turboflex to offer tube with fibre windings at angles adjusted to give the optimum performance for specific lateral critical, torque and torsional stiffness requirements.

Bibby Turboflex have the option to wind tubes using a variety of fibres, each of which give specific advantages.

- Carbon Fibre- This is the principle material giving a high strength/low mass option for the tubes. This is considered as the standard for the TFCFT range of couplings.
- Glass Fibre Glass fibre offers a low cost solution for many applications of moderate length. The mass to stiffness ratio is less favourable than that for Carbon Fibre but such units do have applications to which they are ideally suited.

- Carbon/Glass Mix- The fibre winding approach adopted by Bibby Turboflex enables us to combine these materials to use the advantages of both to give the optimum solution for a specific application.
- High Modulus Fibre- Due to its high cost and limited availability, the use of high modulus fibre is generally only adopted for the more extreme applications to give optimum solutions.

The tubes are wrapped in a pigment treated glass fibre layer, which serves to protect them against physical damage and Ultra-Violet degradation.

Type TFCFT Composite Tube ("Plug-in") Couplings

Cooling Tower Fan Drives

Bibby Turboflex composite shaft couplings are perfectly suited for driving cooling tower fans. Their ability to operate over long lengths without central bearings. combined with their inherently low mass and generous misalignment capacity, keeps maintenance of the equipment to a minimum. The maintenance free nature of the Bibby Turboflex disc couplings means the units become virtually "fit & forget".

The design is such as to make site assembly as easy as possible. The units can be supplied in standard carbon steel with a variety of protective coatings or, if required, in stainless steel.

Vertical Pump Drives

Bibby Turboflex composite shaft couplings can be employed to great advantage in deep well pump applications such as encountered in water & sewage pumping stations. Their ability to cover long spans without the need for central bearings and their inherent low mass can considerably reduce maintenance costs on units.

This is something advantageous on remote operated or inaccessible plants especially in conjunction with the "fit & forget" nature of the Bibby Turboflex disc couplings.

Material & coatings can be varied to suit the requirements of particular applications.

Axial length adjustment can be incorporated in the couplings in various ways which, when coupled with the generous misalignment capacity and ease of assembly design, can reduce installation time.

When necessary, thrust pins can be added to the unit to support the mass of the central spacer.

Marine Drives

Bibby Turboflex composite shaft couplings have been successfully utilised in marine applications for both ships & hovercrafts.

The low mass and minimal vibration levels. together with the ability to handle long spans without support bearings, have proved a benefit in many such applications.

Special Applications

Bibby Turboflex disc couplings with composite spacer shafts are used in many special applications. Their low mass & low inertia, coupled with the ability to adjust the torsional & lateral characteristics of the shaft during manufacture, have made them applicable for many cases where conventional couplings have been inappropriate. Whilst the application for these shafts is as wide as that for couplings themselves, particular success has been found in marine applications, automobile drives and high speed engine test beds.

Whilst the composite shafting is primarily intended for use with Bibby Turboflex disc couplings, it can equally well be incorporated into any other of our wide range of products.

Misalignment Data

These will be supplied upon request with any order. Guidelines are available for assessment at preliminary stages. The methods of machinery alignment vary accordingly to personal preference. Simple recommended methods are highlighted in our Installation Instructions which are available upon request. The following is a guide to acceptable misalignments at installation.

Note, however, that if machinery growths are known the values may be adjusted in the form of pre-deflection, etc. In addition, please note that the values shown here are **MAXIMUM** values. Reduction in these values will reduce bearing loads and improve the allowance for misalignment due to machinery settlement, etc. thus ensuring greater machinery life and trouble free operation of the coupling.

Installation Alignment

Recommended Installation Alignments shown as % of the Maximum Permitted values for the Couplings								
Allowable Angular / Radial Misalignment	Allowable Axial Misalignment							
20% Maximum	10% Maximum							

Note: Angular / Radial as percentage of stated value for 'Point A'. Axial as percentage of stated value for 'Point C'.

Type TF - Materials

The following standard materials of construction are used in the Torsiflex range. Alternative materials are available for special applications on request.

Hubs: Carbon Steel Spacers: Carbon Steel Adapters: Carbon Steel Discs: Stainless Steel (301)

Bolts: Alloy Steel Nuts: Alloy steel

Overload Collars: High strength 'non-sparking'

material

ATEX Approval Certificate No. SIRA 03XT205

Allowable Misalignments for Disc Couplings

- 1. Combined angular/radial misalignment
- 2. 1 degree angle is equivalent to 0.017 mm/mm radial misalignment
- 3. At zero speed (Static)
- 4. At maximum speed & continuous rated torque

Definition of Misalignment

Angular & Radial Misalignment in 'Combination'

Torsiflex Couplings

NOW AVAILABLE WITH TORSI-LOCK® HUBS

Torsi-Lock provides the ease of a slip fit with the power of a shrink fit

Altra Couplings has responded to industry demand for a cold-install hub that provides the secure torque transmission and balance repeatability of an interference fit. We've combined shaft locking devices with Torsiflex to provide a pre-engineered solution that meets the balance requirements of API 610.

- Cold Install means **NO HOT WORK PERMITS**, providing added safety and productivity in hazardous environments
- Easy, repeatable removal and installation
- Eliminates fretting of hub to shaft
- Compensates for variances in shaft spacing slip on and fix in the needed location
- May be used with keyed or keyless shafts (half key recommended with keyed shafts)
- Fully pre-engineered solution
